New Canaan Oil Company

203-966-5539

As part of our ongoing priority to best serve our customers' needs, we are pleased to offer a brand new service to help protect your home.

The VisiTANK® Monitoring System uses advanced technology to monitor different components of your home.

- **OIL TANK:**
Monitor the oil levels in your fuel oil tank...no run-outs, even if your usage changes
- **BURNER LOCK-OUT:**
Constant surveillance of your burner in case of malfunction...alert may be called in before the house cools and before you know there is a failure even when you're home
- **TEMPERATURE SENSORS:**
Round the clock check on room temperature if a zone fails to operate

**FOR MORE INFORMATION OR TO

The VisiTANK® Monitoring System can be modified to meet your needs and is a simple installation with no messy wiring or inconvenience to you.

The sensors are all wireless and send information about your heating system to our office over your existing phone line.

The oil tank sensor (for above ground tanks) mounts directly on your oil tank and uses ultrasonic technology to send daily readings of your fuel levels.

If the burner stops working and goes into a "lock-out" condition, the burner and temperature sensors alert our office within minutes – even in the middle of the night.

Considerations for Installation...

- ☐ Above Ground Fuel Oil Tank (tank monitoring option not available for underground tanks)
- ☐ Power source and Phone line within 150-feet (modifications available)
- ☐ Access in the event of emergency
- ☐ Phone Service (not available for VOIP services i.e. Vonage/MagicJack)

VisiTANK® is right for you if you...
- leave your home for the weekend
- are away during the middle of winter
- have inconsistent oil consumption
- don't like the idea of waking up to a freezing house

SPECIAL LIMITED TIME OFFER BASIC START-UP:
